

The correct name for *Entomoneis costata* (Hustedt) Reimer (*Entomoneidaceae*, *Bacillariophyceae*)

Michael D. Guiry¹

¹AlgaeBase, Ryan Institute, University of Galway, H91 TK33, Ireland

The name *Entomoneis costata* (Hustedt) Reimer was introduced by Reimer in Patrick & Reimer (1975: 6) for *Amphiprora costata* Hustedt (1930: 338, fig. 623). However, *Amphiprora costata* Hustedt is a later homonym of *Amphiprora costata* O'Meara (1869: 151, pl. XII [12]: fig. 6), a marine species described from material dredged off the Aran ["Arran"] Islands, Co. Galway, Ireland, and is thus illegitimate and cannot form the basis for a new name.

Amphiprora costata Hustedt was described from specimens from two localities: a brackish-water site near Cuxhaven, Lower Saxony, Germany and from a slightly salty habitat near Nikolsburg, the German name for Mikulov, Břeclav District, South Moravian Region of Czechia. Simonsen (1987: 121) designated as lectotype "Rb/13. Moravia meridion. Nikolsburg. leg. J. Bílý".

Several attempts were made to replace *Amphiprora costata* Hustedt, *nom. illeg.* The first of these was *Amphiprora incerta* Bílý (1934: 16), the collector, was also illegitimate as *Amphiprora incerta* Mereschkowsky (1903: 168, figs 36–41) had priority. The second replacement name was introduced by Cholnoky (1960: 20), who proposed the name *Amphiprora hustedtii* Cholnoky, but this name was preoccupied by *Amphiprora hustedtii* F.Meister (1937: 264, pl. 8: figs 2–4). A final, successful, attempt was made by VanLandingham (1967: 162) who proposed the replacement name *Amphiprora cholnokyi* VanLandingham. This latter name is the earliest legitimate one for the taxon currently known as "*Entomoneis costata* (Hustedt) Reimer" and the following combination is thus required.

Entomoneis cholnokyi (VanLandingham) Guiry, comb. nov.

Basionym: *Amphiprora cholnokyi* VanLandingham *Catalogue of the fossil and Recent genera and species of diatoms and their synonyms. Part I. Acanthoceras through Bacillaria.* p. 162, 1967.

Replaced synonym: *Amphiprora costata* Hustedt (1930: 338, fig. 623), *nom. illeg., non Amphiprora costata* O'Meara (1869: 151, pl. XII [12]: fig. 6)

Type locality: "bei Nikolsburg" [Mikulov in the Břeclav District, South Moravia, Czechia].

Lectotype (designated by Simonsen 1987: 121): Slide Rb/13. "Moravia meridion. Nikolsburg. leg. J. Bílý" BRM.

Registration: <http://phycobank.org/104834>

Etymology: Named by VanLandingham to honour Béla Jenö Cholnoky (1899–1972) of Hungarian origin who worked extensively on the diatom flora of South Africa from 1952 (Wendker 1988).

Distribution: Widely reported worldwide from North America, Europe, Middle East, SW Asia, Asia, Africa, and Australasia; see AlgaeBase (Guiry & Guiry 2024) for detailed records.

Written in profound admiration for Samuel Leighton VanLandingham (1935–2013).
